

RAPTOR HDx[®]

DIGITAL VIDEO ASSIST

raptorddr.com

Overview

Playback Technologies continues to lead the film and HD production industry with the introduction of a new series of small HD video assist recorders. Smaller and truly 12vdc battery capable make these recorders a perfect fit for the rigors of production whether on stage or remote locations. Add an on-board third party LCD monitor to our factory supplied support bracket and you're ready for run and gun shooting.

The new Raptor HDx and HDc are completely self contained single channel high definition digital disk recorders with no external computer or control software required. Just plug in a standard VGA monitor and USB mouse and keyboard to access the fully integrated video assist application software.

The new Raptor HDx with 2TB of fixed internal storage can record nearly 75 hours of HD footage that maintains outstanding picture quality-even for critical focus review and dailies viewing. The Raptor HDc uses a single removable notebook drive and is intended primarily for commercial assist users. These new Raptor HD units record AVI files using a highly efficient Motion JPEG codec. All Raptor HD products boot from an ultra reliable solid state memory module (where the internal computer's operating system and application software reside) providing a near bulletproof computer environment.

Users can select HD-SDI, HDMI or HD component input signals along with all popular 24 frame production formats and resolutions. The outputs of the RED camera are fully supported as well.

Record standard-def composite video in NTSC or PAL. Select from embedded audio or balanced inputs.
